# New Mexico State University Klipsch School of ECE <br> EE 493/543 - Power Systems III <br> Fall 2009 <br> Project Part - I <br> Due: Monday, 10/30/2009, 4 PM - will not be extended. 

Name (print) : $\qquad$
ID \# : $\qquad$

I have neither given nor accepted help on this test
Signature: $\qquad$

| Parts | Maximum Points | Actual Score |
| :---: | :---: | :---: |
| 1 | 10 |  |
| 2 | 05 |  |
| 3 | 35 |  |
| 4 | 10 |  |
| 5 | 10 |  |
| 6 | 30 |  |
| Total | $\mathbf{1 0 0}$ |  |

You may use MATLAB ${ }^{\circledR}$ or any other programming language of your choice. Any ready EMS software (like Powerworld ${ }^{\circledR}$ ) is not permitted.

Note: You will submit your code for me to cross-check your answers. For grading, your answers will be cross-checked with the results from the code that you will submit. The code will consist of ONE file that needs to be run, and all the results should be displayed either on the MATLAB command window, or stored in a file. Any results that are not displayed properly with accompanying legend will NOT be considered for grading.

This is a take-home exam. NO interactions between students are permitted. Please follow the code of ethics very strictly. Any defaults will result in zero-grade and will be formally reported to the department.

Following are the data for a 6-bus power system rated at $115 \mathrm{kV}_{\mathrm{L}-\mathrm{L}}$. Take the three-phase power base of 100 MVA for conversion to per unit.

| Bus | Load (MVA) | Generation | Capacitors (MVAR) |
| :---: | :---: | :---: | :---: |
| 1 (Slack) | $50+\mathrm{j} 80$ | Yes |  |
| 2 | $95+\mathrm{j} 50$ | --- | 70 |
| 3 | $60+\mathrm{j} 110$ | 200 MW | 80 |
| 4 | $70+\mathrm{j} 100$ | --- |  |
| 5 | $80+\mathrm{j} 40$ | 120 MW | 60 |
| 6 | $40+\mathrm{j} 50$ | --- |  |

| Line |  | Length (km) |
| :---: | :---: | :---: |
| From-Bus | To-Bus |  |
| 1 | 2 | 70 |
| 1 | 3 | 90 |
| 2 | 4 | 80 |
| 4 | 5 | 100 |
| 4 | 6 | 50 |
| 5 | 6 | 85 |
| 3 | 5 | 60 |

The impedance of all lines is $0.1+0.4 \Omega / \mathrm{km}$. Generators on bus 3 and bus 5 keep the bus voltage magnitude constant at 1.05 per unit. The slack bus voltage is $1.01 / 0^{0}$ per unit.

Answer the following questions. For parts (1) through (4), assume the capacitors are not connected to the system.

1) Formulate the bus admittance matrix in per unit. Show it in polar form below:
$\mathrm{Y}_{\mathrm{BUS}}=$

|  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

2) Identify generator buses and load buses. Enter in the table below the type of each bus, and known/unknown quantities (in per unit) at each bus.

| Bus | Type | Known Quantities (specified) |  | Unknown Quantities |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Slack |  |  |  |  |
| 2 |  |  |  |  |  |
| 3 |  |  |  |  |  |
| 4 |  |  |  |  |  |
| 5 |  |  |  |  |  |
| 6 |  |  |  |  |  |

3) Obtain load flow solution assuming a flat voltage start using Newton-Raphson method. Show below the voltages and angles at all buses at the end of every iteration. Consider tolerance of $1 \times 10^{-5}$ per unit power. Add/delete rows according to the actual number of iterations you have.

| Iteration | Bus\#1 |  | Bus\#2 |  | Bus\#3 |  | Bus\#4 |  | Bus\#5 |  | Bus\#6 |  |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | $\|\mathbf{V}\|$ | $\boldsymbol{\delta}$ | $\|\mathbf{V}\|$ | $\boldsymbol{\delta}$ | $\|\mathbf{V}\|$ | $\boldsymbol{\delta}$ | $\|\mathbf{V}\|$ | $\boldsymbol{\delta}$ | $\|\mathbf{V}\|$ | $\boldsymbol{\delta}$ | $\|\mathbf{V}\|$ | $\boldsymbol{\delta}$ |
| 1 |  |  |  |  |  |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |  |  |  |  |  |
| 6 |  |  |  |  |  |  |  |  |  |  |  |  |
| 7 |  |  |  |  |  |  |  |  |  |  |  |  |
| 8 |  |  |  |  |  |  |  |  |  |  |  |  |
| 9 |  |  |  |  |  |  |  |  |  |  |  |  |

4) Tabulate the final voltages, loads, generations, and injections at all the buses below.

| Bus | $\mid$ V $\mid$ | $\boldsymbol{\delta}$ | Load |  | Generation |  | Injection |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | MW | MVAR | MW | MVAR | MW | MVAR |
| 1 |  |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |  |
| 6 |  |  |  |  |  |  |  |  |

5) Show the final line-flows, and line losses, below. Perform a power-check on your results.

| From-Bus | To-Bus | Injected Power |  | Power Loss |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | MW | MVAR | MW | MVAR |
| 1 | 2 |  |  |  |  |
| 1 | 3 |  |  |  |  |
| 2 | 1 |  |  |  |  |
| 2 | 4 |  |  |  |  |
| 3 | 1 |  |  |  |  |
| 3 | 5 |  |  |  |  |
| 4 | 2 |  |  |  |  |
| 4 | 5 |  |  |  |  |
| 4 | 6 |  |  |  |  |
| 5 | 3 |  |  |  |  |
| 5 | 4 |  |  |  |  |
| 5 | 6 |  |  |  |  |
| 6 | 4 |  |  |  |  |
| 6 | 5 |  |  |  |  |
| POWER CHECK |  |  |  |  |  |
| Total Power Generated |  | Total Load |  | Total Loss |  |
| MW | MVAR | MW | MVAR | MW | MVAR |
|  |  |  |  |  |  |

6) Repeat parts (4) and (5) with shunt capacitors connected. Describe how you will formulate the problem. What is the difference in results? Explain the reasons for this difference.

| Bus | $\mid$ V $\mid$ | $\boldsymbol{\delta}$ | Load |  | Generation |  | Injection |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | MW | MVAR | MW | MVAR | MW | MVAR |
| 1 |  |  |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |  |  |
| 6 |  |  |  |  |  |  |  |  |

| From-Bus | To-Bus | Injected Power |  | Power Loss |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | MW | MVAR | MW | MVAR |
| 1 | 2 |  |  |  |  |
| 1 | 3 |  |  |  |  |
| 2 | 1 |  |  |  |  |
| 2 | 4 |  |  |  |  |
| 3 | 1 |  |  |  |  |
| 3 | 5 |  |  |  |  |
| 4 | 2 |  |  |  |  |
| 4 | 5 |  |  |  |  |
| 4 | 6 |  |  |  |  |
| 5 | 3 |  |  |  |  |
| 5 | 4 |  |  |  |  |
| 5 | 6 |  |  |  |  |
| 6 | 4 |  |  |  |  |
| 6 | 5 |  |  |  |  |
| POWER CHECK |  |  |  |  |  |
| Total Power Generated |  | Total Load |  | Total Loss |  |
| MW | MVAR | MW | MVAR | MW | MVAR |
|  |  |  |  |  |  |
